

Value

The Graphics Lab integrated system of facilities database, paper graphic signs and sign display hardware adds new value in several categories...

Gaining Extra Leverage...

COMPLIANCE

Lower your fine potential! Understanding and complying with government regulations is easier for staff when they have clear reminders available on the wall. Government regulators will appreciate your efforts when you use the Graphics Lab system.

RISK

Personnel are less likely to take risks if they can trust the safety message. Our system builds trust and minimizes risk with a highly efficient means of managing hazard communication, potentially lowering insurance costs. Talk to your insurer about qualifying for discounts.

COOPERATION

PhD vs. CIH?

Safety and staff will find common ground defining appropriate safety messages. Greater cooperation = increased productivity.

AWARENESS

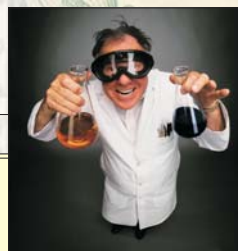

Capture the attention of all personnel. It's the hardest thing to get, the easiest to lose. Give them the means to keep up with your directives as they change over time.

APPEARANCE

Get rid of sign clutter, make your corridors a model of visual efficiency. It's the small details that reflect well on your entire organization. Definitely a morale booster!

TRAINING

Extend your training dollar! Our graphic formats can easily display existing training protocols on the wall. Paper graphics can be posted and rotated to keep the message fresh. The most important lessons need never be far away.

MANAGEMENT

Our system gives you a new perspective on your entire facility, making a complex environment much easier to understand. With the details of each room encapsulated in the database, a building's combined hazards can be assessed at a glance. This will greatly increase efficiency of management.
